

Guillermo Power, PhD, BSc

Nottinghamshire, UK | guillermopower@protonmail.me | 07739 733 529 | LinkedIn

Summary

A pragmatic and visionary Technology Leader with a PhD in Computer Science, dedicated to aligning technical execution with business strategy. With 20 years of experience, I have successfully navigated the full business life-cycle, from founding teams to leading enterprise divisions at Oracle. My technical strength lies in high-level architecture and strategic awareness of cloud ecosystems and emerging AI capabilities, enabling me to guide teams effectively. I combine this technical foundation with a strong, pragmatic focus on the responsible adoption of AI. I am keenly interested in moving beyond the hype to identify concrete, low-risk applications of AI that solve real business problems, while proactively addressing the critical questions of AI safety, ethics, and governance that are essential for enterprise deployment. I excel at removing organisational blockers, mentoring engineers into leaders, and driving the adoption of AI to solve real-world enterprise challenges, all while cultivating an inclusive and collaborative culture.

Professional Experience

Senior Software Development Manager Oracle | Aconex | Conject | Nottinghamshire, UK | Feb 2014–Present

- Lead and mentor teams developing on-prem applications and **Oracle Cloud Infrastructure (OCI)** software, ensuring operational excellence and seamless delivery.
- Led the post-acquisition compliance effort for **Aconex** and **Conject** products, migrating them to Oracle’s security, data governance, and architectural standards to ensure full enterprise readiness and regulatory alignment.
- Collaborate with stakeholders to identify inefficiencies, remove blockers, and implement process improvements, enabling teams to focus on high-value work.
- Champion a multi-agent, human-in-the-loop development approach using frameworks such as **BMAD** and **OpenSpec**, emphasising rigorous up-front planning to ensure AI-generated code is reliable, auditable, and aligned with business goals.
- Spearhead internal pilots on the pragmatic application of **Generative AI**, guiding teams to differentiate experimental “dreaming” from enterprise-ready use cases that deliver tangible value.

- Act as a thought leader on **AI ethics and safety**, reviewing internal guidelines and championing responsible innovation aligned with data privacy, security, and company values.

CTO and Founder Bright Noodle Ltd | London, UK | 2012–2014

- Founded and managed a digital marketing consultancy, overseeing all technical operations, client consulting, and project delivery from inception.
- Provided hands-on technical leadership, developing websites and digital solutions for small to medium-sized clients, ensuring alignment with their business goals.
- Managed relationships with external suppliers and coordinated freelance developers and designers to deliver projects on time and within budget.
- Gained deep experience in entrepreneurship, client management, and full-stack development while adapting to a rapidly changing digital landscape.

CTO Media Ingenuity Ltd / LeadMarket Ltd | London, UK | 2007–2011

- Transformed software development processes by introducing **Agile methodologies, CI/CD pipelines, and server virtualisation**, significantly improving team efficiency.
- Led a team of 9 developers and testers, driving the development of high-traffic consumer websites and securing **£17.5M in funding** through robust technical leadership.
- Implemented **disaster recovery procedures, load-balanced web servers, and database replication**, ensuring system resilience and scalability.

Web Developer RNLI | Poole, UK | 2005–2007

- Played an integral role in the redevelopment of the RNLI's public website and internal intranet, gaining experience in delivering digital projects within a large, mission-driven organisation.
- Collaborated with internal stakeholders and external subcontractors to ensure project alignment with business needs—an early introduction to cross-functional teamwork.

Research Fellow University of Southampton | Southampton, UK | 2003–2005

- Contributed to two major funded research initiatives (EU ADAPT project and JISC TOIA project), focusing on user modelling, adaptive systems, and online assessment technologies.
- Acted as interface design consultant for the TOIA project, gathering requirements and translating user needs into technical specifications—an early foundation for my later stakeholder management skills.
- Developed software prototypes using Java, SQL, and XML, bridging the gap between academic research and practical application.

Strategic Focus Areas

- Pragmatic AI adoption | Enterprise AI governance | AI-augmented engineering leadership

Technical Skills

- **Leadership:** Team management, process optimisation, stakeholder collaboration, AI-driven workflows
 - **Cloud & Infrastructure:** Oracle Cloud Infrastructure (OCI), Kubernetes, AWS (EC2), VMWare
 - **Methodologies:** Agile, ITIL, Continuous Integration, Test-Driven Development (TDD)
 - **AI & Automation:** Familiarity with AI tools for productivity, code review, and process automation
 - **Core Proficiencies:** C#, Java, JavaScript, SQL; AI-augmented development (BMAD, OpenSpec, agentic coding)
-

Personal Projects

- **Local AI Experimentation:** Running inference and image generation on consumer hardware to evaluate open models for practical, low-cost applications.
 - **Homelab Automation:** Maintain a small server cluster (Raspberry Pi, containers) with infrastructure-as-code practices for media, network, and automation services.
 - **Self-hosted Website:** Personal site for sharing technical insights, project documentation, and professional updates.
 - **Research Publications:** Author of working papers on technology, AI, and software engineering, available via SSRN.
-

Education & Training

- **PhD in Computer Science** | University of Southampton | 2003
Thesis: *How levels of anthropomorphism in conversational interfaces affect user expectations*
 - **BSc (Hons) in Computer Science and Mathematics** | University of Portsmouth | 1998
-

Interests

- AI and its impact on software development, retro computing, running, and off-roading, and classic cars.
-
